

How to Replace/Install a 510 Elbow

Removing old elbow

1. Use a can opener or flat head screwdriver and pop off the front cover.
Set the plate and tab aside.

-
2. Push down on the tabs as shown to release the internal elbow.

-
3. Remove the old elbow from the center of the spool.

Install new elbow with the tabs facing up.
Push them through the openings and attach the plate using the same tool.
