Replacing Swivel on Wall Mounted Hose Reels

SWIVEL

HEX SCREW

Note: Model 704 is
   shown in picture
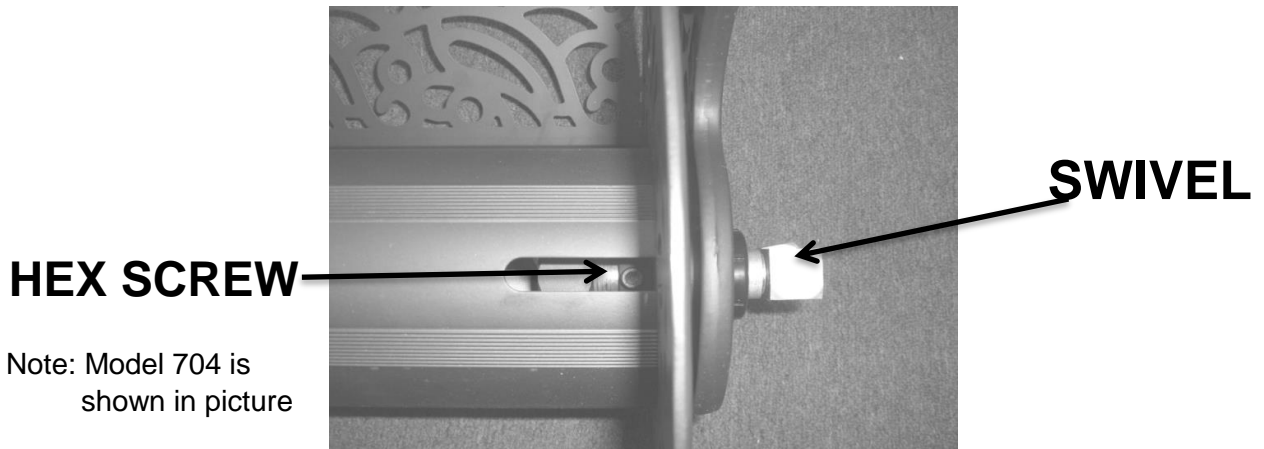

We recommend removing the old swivel before ordering a new one in case there is internal corrosion. Spray some penetrating oil internally to help remove any corrosion.

TOOLS REQUIRED:
ALLEN WRENCH OR HEX SCREWDRIVER
PLIERS

1   Locate the opening in the hose reel spool revealing the HEX SCREW.

2   Use an Allen Wrench or Hex Screwdriver to **loosen** the HEX SCREW.

3   Use PLIERS to unscrew the swivel from the elbow connector inside of the drum. **DO NOT HOLD THE SQUARE SWIVEL HEAD** as it is designed to turn. Hold the swivel shaft stationary and turn the reel with your right hand to unthread the swivel.

4   Remove old SWIVEL and tightly install the replacement SWIVEL. Make sure there is plumber's tape on the male threads of the swivel before installing.

5   Tighten HEX SCREW.

6   Re-attach leader hose to the new swivel and check for leakage.
